                                                                                                                                                                                                                                                                                                          Gaps
specific 2a (SNS-2a) nucleotide sequence. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersensitivity.
                                                                                                                                                    241 ttgacctaaaggcctccaggaagttgcccaactctatggcgacaatcctcggaggcttt 299

The present sequence is that of cDNA encoding a novel human tetrodocoxin resistant sodium channel, termed NaN (see AAB20121).

The cDNA was isolated from a human dorsal root ganglia tissue cDNA library by PCR amplification (see also AAF30122-23). NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTY-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a correct useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an expension of that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant procession of NaN mand in the recombinant procession or the diagnose, and in the recombinant procession or procession or (antisense) to down-regulate the page of the procession or (antisense) to down-regulate the procession or (antisense) to down-regulate the page of the procession or (antisense) to down-regulate the procession or (antisense) to down-regulate the procession or the diagnosis of disease, and in the recombinant the page of the procession or (antisense) to down-regulate the procession or the diagnosis of disease, and in the recombinant the page of the procession or (antisense) to down-regulate the procession or the page of the procession or (antisense) to down-regulate the procession or (antisense) to down-regulate the procession or (anti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   agaagtctaaaagaccagacaggagaagtaccccagcctcaacctcagcttgacctaaagg 252

The nucleotides are included to maintain the nucleotide numbering given in the specification for this DNA sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13 tcagggtgaagatggaggaggaggtactacccggtgatcttcccggacgagcggaatttcc
                                                                                                                                                                                                                                                                                                                             The present sequence encodes a type 5 sodium channel protein designated PN5. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX) The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and

                                                                                                                                                                                                                                                                                                   The present sequence encodes a type 5 sodium channel protein designated PNS. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root gangila. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, tranmatic injuries, AnDS-related neuropathy, and especially neuropathic pain, e.g. migraine and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   D,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ij
                                                                                                                                                                                                                                                                                                                                                            This is the nucleotide sequence of an isolated nucleic acid which encodes the rat NaN channel (see AAY06596), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel CDNA was obtained from Sprayue-DBALPY at DRG CDNA by PCR and RACE amplification (see also AAX87600-17). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAX87609-98) are provided. The invention also includes expression vectors and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acids encoding sodium channels, used to develop products for treating acute or chronic pain or hyperexcitability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             provider. In the invention also includes explession vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexitability phenomena. The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The NaN gene has been named Scnlla.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  192 aagaagtctaaagaccagacaggagagagtaccccagcctcaacctcagcttgacctaaag

Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena -

Example 1; Fig 1; 162pp; English.

The CDNA was isolated from a dorsal root ganglia tissue CDNA library by PCR amplification using generic primers (from conserved library by PCR amplification using generic primers (from conserved library by PCR amplification using generic primers (from conserved primers (see also AAR30105-19), and RACE amplification. The copen reading frame shows 73% similarity to the human NaN sequence (see AAR30101). NaN belongs to the a-subunit voltage-gated sodium channel protein family and propagation of impulses in channel protein family and propagation of impulses in channels underlie the generation and propagation of impulses in channels underlie the generation and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or continents. The present sequence is that of cDNA encoding a novel rat tetrodotoxin resistant sodium channel, termed NaN (see AAB20122). disease, and in the recombinant production of NaN polypeptides.

SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersenettivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mammalian sodium channel protein for treating pain and hypersensitivity

                                                                                                                                                                                                                                                                                                                                                           Sensory r
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          160
```

This is the nucleotide sequence of an isolated nucleic acid which encodes the mouse NaN channel (see AAY06597), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel cDNA was obtained from mouse trigeminal ganglia cDNA by PCR amplification using rat NaN-based primers (see AAX87600-02) and polypeptides (see AAX06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells

Claim 1; Fig 7A1-3; 91pp; English.

```
New isolated nucleic acids encoding sodium channels, used to develop products for treating acute or chronic pain or hyperexcitability
                                                                                                                                                                                                    These bases represent nucleotides missing from the sequence given in Fig 7 of the paperification. The nucleotides are included to maintain the nucleotide numbering given in the specification for this DNA sequence"

Peripheral nerve tetrodotoxin-resistant sodium channel alpha subunit; tetrodotoxin; TTX; peripheral nerve sodium channel type 3; PN3; human; sodium channel protein; peripheral nervous system; allodynia; neuropathy; hyperalgesia; traumatic injury; antidiabetic; neuroprotective; vulnerary; analgesic; anti-HIV; ss.
tetrodotoxin resistant sodium channel, termed NaN (see AAB20124).

The CDNA was isolated from trigeminal ganglia CDNA using primers (see AAB20120-12) based on rat NaN sequences. Mouse NaN shows to the Samilarity to human NaN (see AAB20121). The gene encoding NaN, termed Scnlia, is located on mouse chromosome 9. NaN belongs to the a-subunit voltage-gated sodium channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal corriging the body (dorsal root ganglia) and the face (trigeminal corriging pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (animal channels) to down-regulate NaN expression, in the diagnosis of carrect cannels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63 tctgtcctgagggtgaagatggatgacagatgctacccagtaatctttccagatgagcgg 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                   ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1;
                                                                                                                                                                                        The invention provides purified and isolated rat and human peripheral nerve tetrodotoxin (TTX)-resistant sodium channel alpha subunit proteins. The rat peripheral nerve sodium channel 1973 (PN3) protein or its human homologue are useful for the development of antibodies against PN3 which are useful in affinity chromatography to purify recombinant sodium channel proteins or polypeptides, or as a research tool. The PN3 proteins are useful as therapeutic targets for compounds to treat disorders of the peripheral nervous system such as allodynia, hyperalgesia, diabetic eneropethy, traumatic injury and acquired immunodeficiency syndrome encoding the human hPN3 protein.
                                                                                                                        New rat and human tetrodotoxin-resistant, voltage-gated sodium channel proteins, present in peripheral nerve tissue, useful as a therapeutic target for compounds treating peripheral nervous system disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                             aaggagaaaaagaagtctaaagac-----cagacaggagaagtaccccagcct 230

The invention relates to a terodotoxin-resistant sodium channel alphasubunit protein from dog nodose ganglion (NaNG). The CDNA and encoded proteins are useful in the study of pain and screening for compounds which modulate pain. The terodotoxin-resistant sodium channel (NaNG) is unusual in that it is expressed specifically in nodose ganglia which are at the trunk of the vagus nerve, making connections with the spinal accessory nerve, hypoglossal nerve and the superior cervical ganglian of the sympathetic trunk. Therefor NaNG is a unique target for compounds involved in regulations of pain. Compounds can be screened in vivo or in vitro using standard techniques to screen for local anesthetics and pain vitro using standard techniques to screen for local anesthetics and pain killers. The present sequence represents the nucleotide sequence of NaNG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     230
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sensory neuron sodium channel protein; insensitive; tetrodotoxin;

The proteins can be used for identifying modulators of the sodium channel. Blockers of the sodium channel. Blockers of the sodium channel will block or prevent the transmission of impulses along sensory neurons and thereby be useful in the treatment of acute, chronic or neuropathic pain. The novel protein is found only in sensory neurons and not in glia, muscle or the neurons of the (paralsympathetic, enteric or central nervous system. The protein is found preferably in the neurons of the dorsal root ganglia or cranial ganglia. This

```

```
The sequences given in AAT77803-06 encode the wild type and three variant forms of a rat sensory neuron sodium channel protein which is insensitive to tetrodotoxin. The proteins can be used for identifying modulators of the sodium channel. Blockers of the sodium channel. Blockers of the sodium channel will block or prevent the transmission of impulses along sensory neurons and thereby be useful in the treatment of acute, chronic or neuropathic pain. The novel protein is found only in sensory neurons and not in glia, muscle or the neurons of the (para)sympathetic, enteril nervous system. The protein is found preferably in the neurons of the dorsal root ganglia or cranial ganglia. This

The rat peripheral nerve sodium channel type 3 (PN3) protein or its human homologue are useful for the development of antibodies against PN3 which are useful in affinity chromatography to purify recombinant sodium channel proteins or polypeptides, or as a research tool. The PN3 proteins are useful as therapeutic targets for compounds to treat disorders of the peripheral nervous system such as allodynia, hyperalgesia, diabetic neuropathy, traumatic injury and acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peripheral nerve tetrodotoxin-resistant sodium channel alpha subunit; tetrodotoxin; TTX; peripheral nerve sodium channel type 3; PN3; rat; sodium channel protein; peripheral nervous system; allodynia; neuropathy; hyperalgesia; traumatic injury; antidiabetic; neuroprotective; vulnerary; analgesic; anti-HIV; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New rat and human tetrodotoxin-resistant, voltage-gated sodium channel proteins, present in peripheral nerve tissue, useful as a therapeutic target for compounds treating peripheral nervous system disorders

Wood JN;

Akopian AN,

The sequences given in AAT77803-06 encode the wild type and three variant forms of a rat sensory neuron sodium channel protein which is insensitive to tetrodotoxin. The proteins can be used for identifying modulators of the sodium channel. Blockers of the sodium channel in block or prevent the transmission of impulses along sensory neurons and thereby be useful in the treatment of acute,

3'); double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. RNA provided by Dr. Bertrand Jordan. Library went through two rounds of normalization, and was constructed by Bento Soares and M.Fatima Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.
